# BUTTER SILO AND BUTTER TRANSPORT

These devices serve as a buffer tank for the produced butter for the continuous operation of the butter-making machine when the butter packing machine or refilling of new packages fails. It can be used for any type of continuous butter making machine.

The all-stainless-steel container with auger ensures higher hygiene in butter production and thus extends butter shelf life.

The hopper is equipped, at the client's request, with one or two outlet necks to which butter pumps are then connected.

Container sanitation can be performed at the same time as the butter-making machine, or separately.

Command and control of operation/sanitation is mostly in the control panel of the butter-making machine.

Parameters	
Volume ZDM 1	0,8 – 1 m <sup>3</sup>
Volume ZDM 2	1 m <sup>3</sup>
Volume ZDM 3	2 m <sup>3</sup>
Volume ZDM 4	3 m <sup>3</sup>
